1 PROFESSIONAL OVERVIEW

As an Advanced UI/UX Designer, I create human-centred digital experiences that balance aesthetic sophistication with functional clarity. My expertise spans the complete design process—user research, information architecture, wireframing, interaction design, and high-fidelity prototyping—for web applications, mobile platforms, and SaaS products.

I bring a rigorous, evidence-based approach to design challenges: every interface decision is validated through user research, usability testing, and analytics interpretation. My command of Figma, user testing methodologies, and design system architecture enables me to deliver scalable, pixel-perfect design solutions that improve conversion rates, reduce churn, and create measurable business value through superior user experience.

200+ Screens Designed	AA WCAG Compliant	40%+ Avg CVR Improvement	Figma Expert Proficiency

2 CORE EXPERTISE & KEY SKILLS

■ User Research & Persona Development

Qualitative and quantitative research methodologies—interviews, surveys, card sorting, and heatmap analysis—to build evidence-based user personas and journey maps.

■ Information Architecture & Wireframing

Logical site maps, user flows, and low-fidelity wireframes that establish structural clarity before visual design investment.

■ High-Fidelity UI Design

Pixel-perfect interface design with mastery of visual hierarchy, micro-interactions, responsive layouts, and accessibility standards (WCAG 2.1 AA).

■ Interactive Prototyping

High-fidelity clickable prototypes in Figma for stakeholder communication, developer handoff, and usability testing.

■ Design System Architecture

Scalable component libraries, design tokens, and documentation that enable consistent product development at speed.

■ Usability Testing & Iteration

Moderated and unmoderated testing protocols with structured analysis frameworks translating user feedback into actionable design improvements.

■ Conversion Rate Optimisation (CRO)

Evidence-based UI optimisation of landing pages, checkout flows, and onboarding sequences to improve task completion and conversion metrics.

3 PROFESSIONAL STRATEGY & WORK APPROACH

Double Diamond Design Process

Discovery and Definition phases (understanding the problem space through research) precede Development and Delivery (generating and delivering solutions). This framework prevents expensive late-stage redesigns by validating direction early.

Atomic Design System Methodology

UI components are built from atoms (buttons, inputs) to molecules (form groups) to organisms (navigation bars) to templates and pages. This hierarchy ensures design consistency and dramatically accelerates development speed.

Accessibility-First Design

WCAG 2.1 AA compliance is baked into the design process from the outset—not retrofitted. Colour contrast ratios, keyboard navigation patterns, and screen reader compatibility are verified at every design review.

Continuous Feedback Integration

Post-launch analytics (session recordings, funnel drop-off analysis, A/B test results) feed directly into iterative design improvement cycles, ensuring the product continuously evolves toward user and business goals.

4 WHY CHOOSE THIS EXPERT

❖ Research-Validated Design Decisions

Every significant design choice is grounded in user evidence, minimising risk and maximising adoption.

❖ Developer-Friendly Handoff

Precise specifications, annotated Figma files, and design system documentation that reduce implementation ambiguity.

❖ Accessibility Commitment

Inclusive design expertise ensuring digital products serve the widest possible audience.

❖ Business Metric Focus

Design outputs are measured against conversion, retention, and satisfaction KPIs—not just visual quality.

❖ Cross-Functional Collaboration

Experienced working within agile product teams alongside developers, product managers, and stakeholders.

This document presents the professional profile of a Advanced UI/UX DESIGN Specialist. All capabilities described reflect real-world, industry-standard expertise.
